

CLEVELAND AND LINDEN INTERSECTION

The City of Caldwell is designing improvements to the Cleveland Boulevard and Linden Street intersection in Caldwell.

This intersection serves as a vital route for motorists and a major hub for businesses. Improvements will help improve safety, allow traffic to move more smoothly and reduce delays at this busy intersection.

Cleveland and Linden intersection looking west.

Some business entrances near the intersection will become right-in/right-out. This means drivers can turn right into or out of the driveway but cannot turn left across traffic. Reducing left-turn movements increases public safety along our roadways.

Process and Schedule

Early 2026	Design work.
Late 2026 / Early 2027	Host public meeting to share improvement plans.
2027	Finalize design plans.
2028	Construction is anticipated to begin.

CLEVELAND AND LINDEN INTERSECTION

FREQUENTLY ASKED QUESTIONS

1. Why are improvements needed?

The intersection is already busy and traffic along Cleveland Boulevard is expected to grow. From 2019 through 2023 there were 50 crashes at the intersection and 23 involved injuries. The proposed improvements will reduce turning conflicts while making the intersection safer and easier to travel through.

2. How will the improvements help traffic?

New right-turn lanes will be added in both directions on Linden Street so right-turning vehicles do not block through traffic. Future traffic forecasts show that the improvements could reduce the average evening rush-hour wait times at the intersection from about 58 seconds to about 34 seconds.

3. Will I still be able to reach nearby businesses?

Nearby businesses will remain accessible, but some driveways will change to right-in/right-out only. The current McDonald's driveway on east Linden Street will close and a new connection will allow access from the road behind the business, providing a safer access point for all McDonalds patrons.

4. How will pedestrian safety improve?

Flashing beacons will be added at the pedestrian crossings near the Cleveland Boulevard right-turn lanes to make people crossing more visible. Drivers will still be required to yield at these crossings.

5. When could construction begin?

Construction is expected to begin in 2028. The city will finish the design, purchase any land needed for the improvements and relocate utilities. A public meeting is planned for late 2026 to share the plans and hear your feedback. The schedule may change as the project moves forward.
